

Press Release

AET Certified Solution Center in Germany

Arnhem, 26 June 2008 - You can now experience A.E.T. Europe B.V. (AET) products and technology at the new AET Certified Solution Center at the premises of our partner IDpendant in Germany, Unterschleissheim near Munich.

The AET Certified Solution Center shows state-of-the-art technical solutions and highlights the advantages of the interaction of SafeSign IC and BlueX with the major IT security applications and hardware components.

You can see how smart cards and USB tokens are turned into easily manageable, multifunctional all-stars. BlueX combines all functions required for the secure generation and administration of smart cards and digital certificates. A complete integration of work time-recording and access systems is shown in the AET Certified Solution Center. The innovative and flexible management solution joins two different worlds: 'logical' and 'physical' access, creating a solid base of trust for electronic business processes. You can see how businesses can centrally manage all digital identities in their company during their entire life cycle, including their generation, update, use and revocation. And there is more: the system controls all card-related processes, including issuing and personalizing them and all functions related to their use – e.g., disabling and enabling them – as well as the issuing of visitor and replacement cards. The BlueX solution can be customized to meet every customer's specific needs.

In addition the AET Certified Solution Center shows the interaction between SafeSign IC and different IT security applications either based on smart cards or USB tokens to give you an idea how flexible SafeSign IC is.

SafeSign IC is shown in the following scenarios:

- Windows XP and Vista Logon
- Checkpoint VPN
- Harddisk encryption from Secude and Winmagic
- Sign on for SAP with Secude
- Single Sign on with Imprivata
- MAC OS X Logon, Key Chain, web authentication based on PKCS#11

The AET Certified Solution Center will constantly be expanded; starting early July you can also see SafeSign IC on an Igel Thin client with Windows Terminal server, as well as SafeSign IC in a Citrix environment.

A visit to our AET Certified Solution Center will definitely enrich your level of knowledge. We are looking forward to welcoming you there.

If you are interested in meeting us at the new AET Certified Solution Center please don't hesitate to [contact us](mailto:solutioncenter@idpendant.com) at solutioncenter@idpendant.com.
